DETAILED ACTION

1. This is in response to applicant's amendment and RCE filed 11/12/04, in which claims 1-17 and 21-26 are pending.

Allowable Subject Matter

2. After further search and thorough examination of the present application and in view of applicant's argument, claims 1-17 and 21-26 are found to be in condition for allowance.

The following is an examiner's statement of reasons for allowance: the prior art Lo (US 5,166,929) teaches a method for performing a random access in a mobile communication system (abstract) comprising: monitoring at base station of a reverse common channel (column 2 lines 38-54), determining state information of the reverse common channels corresponding to a result of the monitoring using one slot allocated to a forward common channel (column 2, line 55-66, column 3, lines 52-62 and figure 1) and broadcasting the state information to respective mobile stations through the forward common channel (column 2 lines 67-column 3, line 3, column 3 lines 63-67 and figure 1).

On the other hand, the present application specifically teaches broadcasting the state information combined with power control information based on the state information in a same slot to a mobile station through a forward common channel using each slot allocated to the transmit data to the base station on the reverse common channel based on the state information combined with the power control information.

Art Unit: 2684

These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
